

THE ADVERTISEMENT AND MARKETING IN THE MOVIE: MINORITY REPORT

By: Sally Ibrahim.

INTRODUCTION

For my presentation I will talk about the marketing and advertisement in the world of minority report.

Even though we didn't see a lot of it in the movie, but from what we saw, we can easily see that ads are everywhere in the movie.

CONTENTS

1

The tech used for Ads in the movie

2

Real Life examples

3

Feasibility: Is it possible?

4

Ethics and Legal issues

5

Conclusion

THE TECH USED FOR ADS IN THE MOVIE

- Iris recognition is used to identify people (Perception)
- personalized advertisement appears, and addressing the person by name, although it was never shown in the movie, it is likely that the Ads (AI) are interactive as they ask a question expecting an answer. (communication, audio processing, machine learning)
- Data is gathered by monitoring the person's every move, as people as scanned everywhere. (optimisation)

REAL LIFE EXAMPLES

Streaming services recommendation system

Platforms such as Spotify and Netflix use their users data to recommend similar content to ones they've liked before.

Social media platforms using personalized ads based on online activity

Platforms such as TikTok, Instagram, Facebook using users data to personalize ads based on their activity (i.e. watch time, clicking, search history)

Online megastores

Online retail such as Amazon, eBay, bol.com sites use users data to recommend items that they might like based on their activity (i.e. search and purchase history, clicking)

IS IT POSSIBLE?

Short answer: yes (in my opinion.)

Technically it is possible as the technologies itself already exists, However, for it to be fully implemented like a 1 to 1 replica of the movie nationally or world wide, we are at least 60-70 years early if not a few centuries, and a lot of resources.

But, not because we can means that we should.

ETHICS AND LEGAL ISSUES

- Data security breach
- Informed Consent
- Profiling and Discrimination
- Transparency
- Deceptive Advertising
- Children's Privacy

CONCLUSION

We talked about:

- the technology used for ads in the movie
- real life examples
- the feasibility of such technology
- the legal and ethical issues
